

## Capability overview

### Engineering and services by electrical, instrumentation specialists

Project based E&I activities for oil and gas production systems/locations.

- Detail engineering and drafting
- Work preparation and procurement
- E&I construction (engineers and technicians)
- Instrument fitting (twin ferrule & Autoclave)
- Pre-commissioning / commissioning services
- Power quality services
- Calibration services

### Skilled and qualified

Eprofs specialists are competent, and skilled. With relevant experience, and fully certified (including NOGPA 05.A/B / OPITO incl. HUET, ATEX, VCA, IECEx 05).

### Special tools and equipment

Eprofs can provide all special tools and equipment needed to conduct the requested activities.

We use software tools such as Eplan, SPI (Intools), AutoCAD and M-files with a full range of document templates.

We provide tubing tools, cable tools, calibration tools and electrical test tools to fabricate cable systems, instrument hook-ups, control panels, junction boxes.

### Technical expertise at all levels of E&I installations.

SEW Eprofs offers electrical and instrumentation engineering services, technical assistance, and can perform complete project execution on a turn key basis.
